

```
1 import React, { useState } from 'react'
2
3 const PromiseExample = () => {
4     const [message, setMessage] = useState("Click the button to start promise");
5
6     const handleClick = () => {
7         const myPromise = new Promise((resolve, reject) => {
8             setTimeout(()=> {
9                 resolve("✅ Promise resolved successfully!")
10            }, 2000)
11        });
12
13        setMessage ("⌚ Waiting for promise to resolve...");
14
15        myPromise
16            .then((result) => {
17                setMessage(result); // this part is the one actually display the sucessful
18                message
19            })
20            .catch((error) => {
21                setMessage("❌ Promise rejected: " + error)
22            })
23
24    return (
25        <div className='mx-4 mt-3 mb-3'>
26            <h2>Recat Promise example</h2>
27            <p>{message}</p>
28            <button onClick={handleClick} className='bg-blue-700 px-2 rounded-md text-
white'>Run promise</button>
29        </div>
30    )
31 }
32
33 export default PromiseExample
```
