```jsx
import React, { useState } from 'react'

const AsyncAwaitFetchApi = () => {
    const [user, setUser] = useState(null);

    const fetchUserr = async () => {
        try {
            const response = await fetch('https://jsonplaceholder.typicode.com/users/1');
            const data = await response.json();
            setUser(data);
        }
        catch (error) {
            console.log('Error fetching user');

        }
    };

  return (
    <div className='mx-5 mt-3 bg-slate-300 rounded p-4'>
        <h2>Async Await Fetch Api</h2>
        <button onClick={fetchUserr} className='bg-gray-900 rounded text-white px-2'>Fetch
user</button>
        {user && (<p>{user.name}---{user.email}</p>)}
    </div>
  )
}

export default AsyncAwaitFetchApi
```
